**Befesa Water has pre-screened around 55 projects with an estimated total value of around €9bn**

**Note:** **Pre-qualified:** Projects in which, after a prequalification competitive bidding stage, a short list of companies, included Befesa, have been invited to participate in the process. An intense dialogue with the client is normally taking place to define the final technical and economical feasibility of the project and the competition is restricted to the shortlisted companies.

**Tendered:** Projects in which a public bidding process is underway. Befesa has submitted an economic/technical proposal and is waiting for final resolution/adjustments from the client.

**Proposals:** Projects in which the client is considering a public bidding process. Befesa has already identified the opportunity, has set up local teams to work on the situation, has developed preliminary feasibility studies and is preparing an economic/technical proposal for the project.

**Identified:** Projects in very early stages of development but where certain evidences exist that a public bidding process may be initiated. Befesa begins preliminary studies and analysis and commercial local teams start working on the situation.
